GENERAL INFORMATION:

APPLICANT: Giordano, Anthony
APPLICANT: Xavier, Ashish
TITLE OF INVENTION: NUCLEIC ACID SEQUENCES AND METHODS FOR
TITLE OF INVENTION: IDENTIFYING COMPOUNDS THAT AFFECT RNA/RNA BINDING PROTEIN
TITLE OF INVENTION: INVERACTIONS AND MRNA FUNCTIONALITY
FILE REFERENCE: 50093/014001

Sequence 8, Application US/09437457 Patent No. 6273893

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The sequence contained an oligo-dT track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to verify it as a clone from the non-normalized uterus library cDNA Library Preparation: M.B. Soares Lab, University of Iowa EST sequencing: M.B. Soares Lab, University of Iowa EST sequencing: M.B. Soares Lab, University of Iowa Clone distribution: clones will be available through Research Genetics (www.resgen.com) BI401298 287 bp mRNA linear EST MI-P-CPO-nvm-d-02-0-UI.sl MI-P-CPO Sus scrofa cDNA clone MI-P-CPO-nvm-d-02-0-UI 3', mRNA sequence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1 GTCCGCCCGCTGAGG 15
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The sequence contained an oligo-dT track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to verify it as a clone from the normalized placenta library cDNA Library Preparation: M.B. Soares Lab, University of IOWA EST sequencing: M.B. Soares Lab, University
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 288 bp mRNA linear EST.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sus scrofa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The sequence contained an oligo-dT track that was present in the oligonucleotide that was used to prime the synthesis of first rand cDNA and therefore this may represent a bonafide poly A strand cDNA and therefore this may represent a bonafide poly A sail. The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to verify it as clone from the and the oligo-dT track served to verify it as clone from the non-normalized uterus library cDNA Library preparation: M.B. Soares and the oligo-dT track SET sequencing: M.B. Soares Lab, University of Iowa EST sequencing: M.B. Soares Lab, University of Iowa EST sequencing: M.B. Soares Lab and Clone distribution: clones will be available through sessearch Genetics (www.resgen.com)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The sequence contained an oligo-dT track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly a tail. The sequence tag present in the cDNA between the NoII site and the oligo-dT track served to verify it as a clone from the non-normalized uterus library cDNA Library Preparation: M.B. Soares Lab, University of Lowa EST sequencing: M.B. Soares Lab, University of Iowa EST sequencing: M.B. Soares Lab, University of Iowa Clone distribution: clones will be available through Research Genetics (www.resgen.com)

The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to verify it as a clone from the normalized placenta library cDNA Library Preparation: M.B. Soares Lab, University of Towa EST sequencing: M.B. Soares Lab, University of Towa EST sequencing: M.B. inote="Vector: lambda pSB; Site_1: BamHI; Site_2: EcoRI; First strand cDNA was primed with an anchored XhoI-oligo(dT) primer [5'GAAGGACTGAACGGCGCAAGGAGGT)YN 3'; V=A,C,G; N-A,C,G,T] and then dG tailed. Second strand was primed with a BamH1-dC primer [5'AAGAGACTGCGGATCAGATAATAATAATAAT(C) 3']. Double-stranded cDNA was then digested with BamH1 and XhoI and directionally cloned into the BamH1 and SaII sites of lambda pSB vector. Library went through one round of normalization. Library was constructed by Wei Yu at RIKEN

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  allele leads to higher expression of the gene. This is because the polymorphism is found in the 5' leader sequence, which encodes a pepi which regulates expression of the beta2AR gene. The polymorphism is thought to affect individuals' responses to beta-agonists and beta-antagonists, and is likely to influence their predisposition to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AlphalB-adrenergic receptor; human; cardiovascular disease; beta2 adrenergic receptor; genetic variation identification; hypertrophy; disease diagnosis; hypertension; prostatic disease; pulmonary disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           migraine, anaphylaxis and chronic obstructive pulmonary disease (COPD). The gene can, therefore, be used to predict the susceptibility of an individual to these diseases and determine the best treatment.
This sequence represents the human beta2-adrenergic receptor gene, and is amplified by the primers of the invention. The primers are non-self hybridising; contain at least 15 nucleotides (nt) and has a melting

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     generates a homogeneous population of gene segments in a polymerase of reaction (PCR). At least one primer in the pair can extend a 3'-end sequence complementary to a template sequence in a DNA polymerase reaction. The primers are used to amplify segments of the alphalB and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      cardiovascular disease, hypertension and asthma, but variations may also be associated with peripheral vascular, pulmonary, neuropsychic and endocrine-metabolic disorders. These primers allow rapid and specific amplification of large and homogeneous gene segments of the alphalB and amplification of large and homogeneous gene segments of the alphalB and amplification of large and homogeneous gene segments of the alphalB and amplification of large and homogeneous gene segments of the alphalB and amplification of large and homogeneous gene segments of the alphalB and amplification of large and homogeneous gene segments of the alphalB and amplification of large and homogeneous gene segments of the alphalB and amplification of large and homogeneous gene segments of the alphalB and amplification of large and homogeneous gene segments of the alphalB and amplification of large and homogeneous gene segments of the alphalB and amplification of large and homogeneous gene segments of the alphalB and amplification of large and homogeneous gene segments of the alphalB and amplification of large and homogeneous gene segments of the alphalB and amplification of large and homogeneous gene segments of the alphalB and amplification of large and homogeneous gene segments of the alphalB and amplification of large and homogeneous generation of large 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              temperature 50-85 deg. C. Each pair of primers is: non-cross-hybridising; anneals to two distinct segments (separated by at least 400 nt); and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                beta2 genes from a complex mixture of DNAs. This makes possible detection of genetic alterations not previously amenable to routine, automated and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      or more polymorphic positions within these genes, and comparing the pattern of polymorphisms from the individual with a reference polymorphic pattern obtained from a population of individuals exhibiting a predetermined cardiovascular disease status. The polymorphic markers are useful for determining the predisposition of an individual to cardiovascular disorders such as myocardial infarction, unstable angina, hypertension, atherosclerosis and stroke. They are also useful for predicting the likely cardiovascular status of a patient given a treatment regimen comprising administration of cardiovascular drugs (e.g., ACE inhibitors, beta-adrenergic receptor antagonists (beta-blockers) or calcium channel blockers). One or more polymorphic markers provides a basis for predicting the outcome of a treatment regimen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                drugs can be approved for use in the appropriate population, thereby decreasing the number of patients required for a clinical trial, which in turn decreases the duration and cost of such trials. The present sequence represents the human beta-ademergic receptor 2 gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  eliminate patients from clinical trials who are predicted to be non-responsive, or at a risk for an adverse response, to a particular treatment regimen. Adverse results an early trial can be evaluated tidentify polymorphic patterns so that the adverse results can be correlated with a sub-population of the test population, permitting exclusion of such sub-populations from the treatment group. Beneficial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Fragments of the genes comprising a polymorphic site may be used as primers and probes for detecting genetic polymorphisms or in molecular library arrays for high throughput screening. The genes, and the proteins they encode are useful in the screening of potential cardiovascular drugs. Determination of an individual's polymorphic pattern reduces or elaminates trial and error in selecting a treatment for a particular individual cardiovascular patient. It also provides the ability to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        individuals, including gene therapy and pharmaceutical intervention therapy. This sequence represents a variant of the wild type human beta 2-adrenergic receptor gene which is represented in AAZ00773.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          determined. The beta 2-adrenergic receptor sequence variants can be used to develop therapeutics and/or lifestyle drugs. Individual specific beta 2-receptor agonists can be developed. Treatments can be optimized for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 2; Fig 2a; 27pp; German
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              determining an individuals haplotype

                                                                                                                                                                                                                                                                                                       anorexia nervosa and bulimia, or post-traumatic stress disorder. Diseases of the autonomous nervous system, e.g. Bradbury-Eggleston, Sky-Drager and Riley-Day syndromes having sective nordernergic-reeptor disposition, or migraine, allergic conditions, e.g. asthma and atopic disorders, and metabolic illnesses, e.g. morbid obesity including predicting a change in weight, using body mass index, can also be
                                                                                                                                                                                                                                                                                                                                                                                                                        myocardial infarction and stroke. Other conditions that can be determined include neuropsychiatric disease, such as depression, anxioattention deficit disorder with hyperactivity, eating disorders, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     mutation
                                                                                                                                                                                     determined. The beta 2-adrenergic receptor sequence variants can be used to develop therapeutics and/or lifestyle drugs. Individual specific beta 2-receptor agonists can be developed. Treatments can be optimized for individuals, including gene therapy and pharmaceutical intervention therapy. This sequence represents a variant of the wild type human beta 2-adrenergic receptor gene which is represented in AAZ00773.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   gene sequences which have hypotensive, cardiant, neuroprotective and immunosuppressive activity. The products of the invention are used in a method to determine a predisposition for high blood pressure as well as for abnormal blood pressure and other cardiovascular diseases, including

```
gene sequences which have hypotensive, cardiant, neuroprotective and immunosuppressive activity. The products of the invention are used in a method to determine a predisposition for high blood pressure as well as for abnormal blood pressure and other cardiovascular disease, including myocardial infarction and stroke. Other conditions that can be determined include neuropsychiatric disease, such as depression, anxiety, attention deficit disorder with hyperactivity, eating disorders, e.g. anorexia nervosa and bulinia, or post-traumatic stress disorder. Diseases of the autonomous nervous system, e.g. Bradbury-Eggleston, Sky-Drager and kiley-Day syndromes having selective noradrenergic-receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              neuropsychiatric disease; attention deficit disorder; hyperactivity; eating disorder; anorexia nervosa; bulimia; migraine; allergy; drug; post-traum tic stress disorder; autonomous nervous system disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Beta 2-adrenergic receptor; human; hypotensive; cardiant; stroke; neuroprotector; immunosuppressor; predisposition; high blood pressure; cardiovascular disease; myocardial infarction; anxiety; depression;
                                  individuals, including gene therapy and pharmaceutical intervention therapy. This sequence represents a variant of the wild type human beta 2-adrenergic receptor gene which is represented in AAZ00773.
                                                                                             predicting a change in weight, using body mass index, can also be determined. The beta 2-adrenergic receptor sequence variants can be used to develop therapeutics and/or lifestyle drugs. Individual specific beta 2-receptor agonists can be developed. Treatments can be optimized for
                                                                                                                                                                                     disposition, or migraine, allergic conditions, e.g. asthma and atopic disorders, and metabolic illnesses, e.g. morbid obesity including
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 6; Fig 2a; 27pp; German.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           determining an individuals haplotype
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human beta2-adrenergic receptor gene variants, useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Hoehe M, Koepke K,
